

Welcome To ISYS International

Sustaining Success With An Efficient Edge

ISYS International is here to help you become efficient, cost-effective, successful and sustainable - with a progressive business edge.

The starting point is important. Many organisations lack the essential management infrastructure needed to stay competitive. We equip you for success - and to keep on succeeding.

Our approach is making a fundamental difference.

Using ISYS programmes, companies - their supply chains and business groups - government, public sector and voluntary bodies are improving their use of time, money, people, resources, reputations, commercial lead and pivotal stakeholder relationships in uncertain markets and economic conditions.

Fortunately, the best answers are within reach of almost all business-focused organisations. Unfortunately, specific knowledge barriers hold back many.

ISYS provides the essential expertise needed to build and operate modern management systems - leaving managers free to inject first-hand experience from their own operations.

We can then continue the improvement journey via strategic improvement programmes where executives consolidate mounting successes, moving on to plan for higher corporate goals.

Succeeding In An Uncertain World

ISYS International understands that poor management systems bar many businesses from their greatest potential. Companies must be determined to succeed. However, they also need the tools - and knowledge - to reach success.

The two-fold ISYS approach - building practical systems before operating them at a high level - is a systematic extension of single concept.

The fundamental purpose of management systems is to raise efficiency. This empowers managers and organisations to examine routine business decision-making, trimming fat, enhancing processes and elevating environmental, quality and occupational health performance.

With monitoring, evaluation and improvement systems firmly in place, significant gains can be made from sustainability, corporate responsibility and the

the emerging concept of supply chain "resilience" to counter increasing resource uncertainties.

ISYS International Ltd.

Global Reach

Since 2001, ISYS' highly-structured implementation programmes have helped blue-chips in the USA, Europe, Asia, Australasia and South America to succeed with systems such as closely-tailored environmental management systems (EMS).

Initially designed for companies to comply with international standards within months, these are used by oil majors, government departments, local administrations, the professions and in industry.

ISYS has also worked with the Southern African minerals industry, advised the Ethiopian Government about implementing a national environmental strategy and in risk management projects on all the industrialised continents. Today, ISYS works through the UK regions from centres in Northwest and Southeast, bringing committed organisations swiftly up to speed with systems delivering key management data, while, meeting legal, regulatory and commercial pressures.

Low Costs, Minimum Time, Maximum Influence

ISYS orchestra is a suite of tools that includes the Fast-Track-14 concept, which introduces an active online and interactive workshop supply chain dynamic for early ISO 14001 compliance.

Success Precedents

ISYS systems have helped a key UK development agency spearhead local authority leadership changes, construction companies meet environmental and corporate responsibility objectives, public/private sector leaders face tough sustainable legislation, better management of expanding property portfolios and new market entries for hard-working SMEs.

Fast-Track To Success

Engaging Efficient Supply Chains

ISYS International understands that poor management systems bar many businesses from their greatest potential. Companies must be determined to succeed. However, they also need the tools - and knowledge - to reach success.

Moving Well Beyond The Basics

Most business organisations now recognise that supply chain performance can seriously damage - or positively enhance - their competitive edge. Yet for many, engagement begins with the modest ambition of simply meeting Standards.

However, when people are brought together to pool their experiences, ideas and best practice, the outcome is almost always far greater benefits.

Add serious commitment and expert guidance, and the generation of new creative communications, innovation and efficiency can spread across the workplace, affect communities, extend into the Board Room and on to The City and markets.

The resulting commercial edge can raise profitability, reputation, time and resource use, plus stakeholder satisfaction - particularly during uncertain, competitive economic conditions.

Good Reasons To Be Competitive

ISYS understands that companies, business-groups and supply chains need a swift, low-cost route to Standards compliance - ISO 14001, ISO 9001 and OHSAS 18001 for environment, quality and industrial health and safety. Organisations also value new skills to systematically management risk, change and open fresh opportunities in harsh markets.

Benefits Hierarchy

Companies and supply chain members use Fast-Track-14 to move well beyond compliance and benefit directly from greater customer focus, reduced liabilities and more controlled use of energy, water, utilities, transportation and materials, plus reuse and recycling, while minimising waste, nuisance and pollution.

Working closely with clients, they can go even further to share the strategic benefits of alignment behind sustainable, good governance and corporate responsibility drivers set by government, policy-makers and, increasingly, senior UK and EU purchasing authorities.

Vanishing Barriers

Businesses are their own best experts when it comes to populating management systems with operational data. Because many lack the knowledge to build proficient systems, Fast-Track-14 removes information barriers, adding implementation advice online and in workshops.

For the earliest benefits, the programme is structured for committed companies to achieve full ISO 14001 compliance in six-months - and many have done so.

FAST-TRACK-14

Responsive Fast-Track

Extending The Reach of Management Systems

Business-led organisations that initially used Fast-Track-14 to meet international management standards have moved on quickly to an advanced range of commercial and sustainable goals.

Sustaining Construction

Fast-Track-14 prepares UK construction supply chains for ISO 14001 in six months. One national group has gone on to incorporate innovative supplier environmental objectives within its own environmental improvement strategy and sees an essential supplier role in delivering Corporate Responsibility commitments.

Regional Development

After used Fast-Track-14 to gain early ISO 14001 Certification, the Northwest Regional Development Agency has extended the programme to project leadership roles among stakeholders, as part of changes giving agencies statutory planning powers, with economic development and spatial aspects of planning combined under Integrated Regional Strategy

Transport Infrastructure

A rail industry leader is using Fast-Track-14 to generate creative dialogue and an innovative culture in its shortened supply chain to meet tough sustainable requirements anticipated from government, and government-related clients, in the next few years.

Public Private Partnership

A private sector company has expanded its own Fast-Track-14 success to extend "green" and sustainable principles across northern England as part of an acclaimed model for the private sector maintenance of municipal buildings.

Motoring Ahead

Midland Expressway, operating the M6 Toll, has used Fast-Track-14 to both safeguard its carriageways and manage environmental effects across the adjacent landscape and communities.

SMEs

Small to medium-sized enterprises (SME) benefit from Fast-Track-14, with one company reporting its new "green" credentials being recognised by major clients, including a UK power company and a major EU business enquiry.

Extended Business Benefits

Organisations meeting Fast-Track-14's strict closing criteria can look forward to a series of benefits:

- Legal and stakeholder compliance
- Exceeding customer expectations
- Reducing pollution and waste
- A competitive edge in UK and international trade
- Identifying and managing present and future risks
- Demonstrable commitments to shareholders
- Enhanced corporate image and reputation
- A framework for other contemporary management systems
