

**Professional Training to support Environmental Sustainability in the Construction Industry.**

**ISYS**

## **ENVIRONMENTAL AND ISO 14001 WORKFORCE AWARENESS**

This short course is provided in-house for a maximum of 16 delegates as half-day or full-day options. Training supports staff and operational managers in construction companies seriously committed to managing their business's environmental risks.

Construction companies currently running this course with ISYS have made it a regular training feature to maintain full workforce environmental awareness as staff members change and stakeholder demands increase.

The course meets ISO 14001 environmental awareness training requirements.

### **IT ENABLES STAFF AND OPERATIONAL MANAGERS TO:**

- Recognise the need to consider the environment in a sustainable future
- Appreciate opportunities and threats posed by environmental issues
- Be aware of environmental risks and impacts associated with construction
- Understand their role in ISO 14001 compliance
- Know their personal job responsibilities for environmental protection

### **CONTENT:**

- The environment, environmental media and current concerns
- Environmental impacts and risks of construction activities
- Stakeholder environmental demands on construction
- Practical environmental controls in construction
- Risk assessment methodology and preventive action (full-day option)

### **WHO WILL BENEFIT FROM ATTENDING?**

Staff and operators at all levels and functions within a construction company. Typical attendees are contracts managers, site agents, quantity surveyors and foremen/supervisors.

### **OPTIONS**

The basic short course is of half-day duration. The full-day option includes an additional group practical workshop applying the company's environmental risk assessment methodology and documents to a construction case-study reflecting company activities.

### **OUTLINE OF THE WORKFORCE AWARENESS COURSE**

The course provides staff and operational managers with a basic understanding of environmental issues as they affect construction activities.

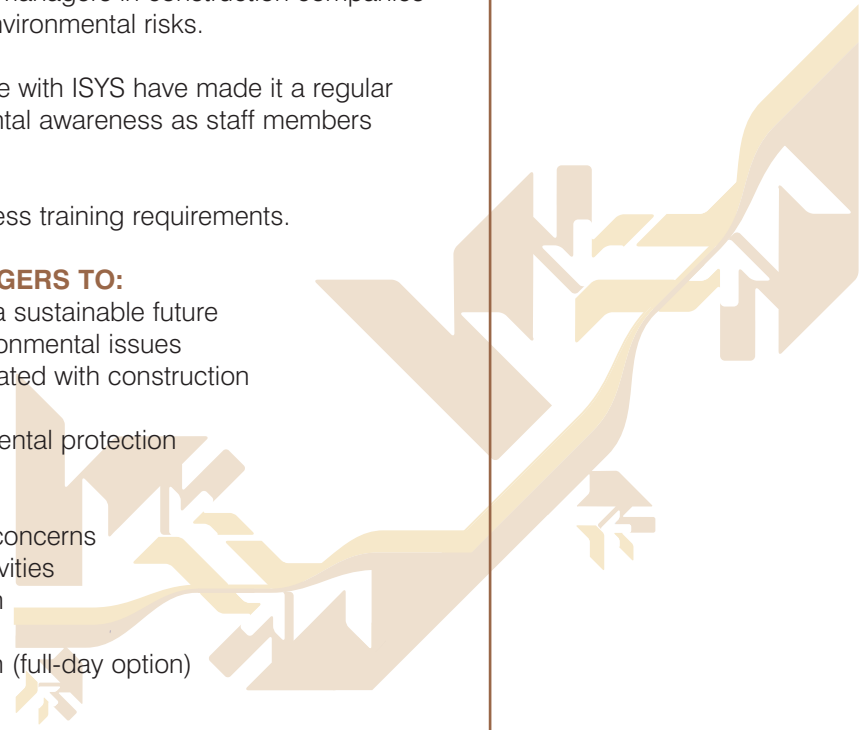

Its key aim is to motivate the people within the company who interface with the physical environment and take personal responsibility for maintaining clean and efficient operations.

**COST £475, plus VAT (half-day), £850, plus VAT (full-day) (excluding venue, meals and refreshments costs (if required) and tutor expenses).**
